What Will The XCN Price Be In 2025-D63QEaBalPU

Hey everyone, today we're going to talk about XCN or Onyx coin, and I want to give some very realistic expectations for people as far as what the price is. The price of it could be in 2025. I see a lot of information out there where a lot of people are saying it's going to multi-dollars, and first and foremost, I want to tell you that I'm a very, I set very realistic goals for my investments, and I don't live with these pie in the sky ideas.

Now, with that being said, certain cryptocurrencies like XRP, I do believe we're going to be worth thousands of dollars in the future, and I'm talking about 10, 20 years from now. I know that upsets a lot of people because they want to get rich overnight. I will tell you, I did turn $10,000 into a million dollars.

You've probably heard that story in 2017 over and over again. I won't rehash it, but a lot of people set very, very weird expectations, and they believe that it's going to come tomorrow, and tomorrow doesn't seem to come even though these prices are doing well because we're in a cyclical bull market in cryptocurrency. Now, you know that I've taken a big position in XCN.

My students were, a lot of them lucky enough to double their money yesterday within a week. If you want to link to the DeFi course, that's down below. I didn't sell any for a couple of reasons.

I want to own a successful and fruitful financial education company, so I'm making a longer-term investment between a swing trade and a longer-term position in XCN as long as certain boxes are checked. I've already made my investment because I know there's a lot of people watching this project. It's so easy to get trending.

It's insane, and the team is working hand-in-hand lockstep with Chain.com, the creator of XCN. Long story is, it's checked off nine out of 10 boxes. I only have one box left, and that is to meet the team and get some real nuts and bolts information about the company before I make a decision on how long I'm holding it.

Now, I didn't sell it yesterday during that pump because my channel, my students, you're not my liquidity. When I invested in XRP, I bought it at $0.02, and I held it since 2017, and I've just taken half off of the table. But I see a lot of people talking about Onyx Coin going to $1.

Let me explain something real quick. Fast math. $1 Onyx Coin would bring you to an over $44 billion market cap.

In today's atmosphere, where Bitcoin is at 80,000, Ethereum is at 1,500, Solana is at, let's say, 120, I do not think that is going to happen overnight. Now, with that being said, I can see a $1 XCN price if the team has a successful launch of the Goliath Layer 1. They finish everything that they're setting out to do, which I believe they can do with liquid staking, things like that. And this becomes not only a bigger lending network, but that peer-to-peer lending decentralisation model is incredible.

Now, with that said, a lot of people and I want to meet the team. But one reason why certain groups of coders and banks, financial institutions have been very quiet over the last few years, and coding and working in the dark in secrecy, honestly, because the last president, Joe Biden, under his administration, wanted to destroy these decentralised projects. And so yesterday, the other day, what, April 10th, Trump signs yet another bill, hashtag Trump, or just type Trump if you're just super stoked on everything he's doing right now.

I would be typing Trump. He signs a bill to nullify the expanded IRS crypto broker rule. It says here, he signed the bill into law to overturn a revised rule from the IRS that expanded the definition of a broker to include decentralised cryptocurrency exchanges, according to a statement from the White House.

Now, one thing that XCN's working on doing is building a type of exchange, not a full-blown exchange of what you think about, but there's an exchange of finance, money moving, there's a handful of tokens that will be bridged, they already are doing that right now, where that would fall under the law, the rule, under the Biden administration, right, that they could be attacked financially, and this could become a litigious thing. So this just happened on April 10th, opening the gateway for all of these companies that are working in the DeFi sector to absolutely flourish, all right? So this, to me, is an incredible time to be investing in DeFi before the world figures it out. And I know you might think, well, Trump is literally sitting there, documents signed, hey, I signed this, everyone knows.

Most people don't understand what DeFi is. Type 1 if you understand what DeFi is, Type 2 if you don't. Decentralised finance.

Self-governance, where people come together and invest in a project, let's say XCN, and you get to vote on how a lot of it is run based on your amount of votes equals the amount of coins you own, right, tokens you own. And it's really an exciting thing. I mean, think about it.

Does JP Morgan turn around and say, hey, everybody that's got an account, you get to vote, and, you know, based on your checking balance on what we're going to do, what type of services we're going to offer our clients? No, you don't get that. And so I'm excited about it. So we've seen recently, in January, a lot of, a lot of you, Type XCN if you were part of the pump, when I brought it to the newsletter first, and then my student's newsletter, and then the channel, and you made a lot of money.

You saw that pump, it just raced from a quarter of a penny up to four and a half, five cents, something like that. And then it came down, a lot of people would say it crashed, it didn't crash, actually, it just ticked down in price, like 90% back, 80% back. The reason why it ticked down in price is because nobody was really talking about it.

And on top of that, you have the added pressure of a Bitcoin bull market in a dip. And that's all it's going to be three months from now, you're going to look back and go, yep, he was right, it was just a dip. And I was buying it up, I started aggressively buying it under one and a half cents, and then really went to town on it at 0.008009. And I told my students, in our coaching call, I said, Look, this is what I'm doing, I'm taking 50% of my allotted investment money for XCN or Onyx coin, and I'm putting it to work with limit orders from the high sevens, eights and nines.

Then when that half of my investment money is depleted, what I'm going to do is I'm going to hold the other half as much as I'd love to deploy it all. Because if Trump doesn't pull a rabbit out of a hat, this market's going lower, and we're going to deploy at half a penny. So we did it, and we bought it up.

And the price did move a little bit, but we were able, I think everybody in the in the group was able to pick up their position. And then right when Trump announced the 90 day pause, well, actually, the day before it is when I told the newsletter, I think it was the day before, I don't remember. So now we're off to the races.

Everybody saw it pump again, and it's just a healthy pullback. But I think that you're going to see something pretty gnarly because first off, in 2020, 2021, Onyx coin was a three and a half billion dollar market cap, right? And the thing that you have to understand is the reason why it was such a big market cap is because a lot of people were excited back then. It was an 18 cent high, all time high price per XEN and the float or the amount of tokens have not been diluted since then, right? So we're talking a legitimate three and a half billion 18 cent price per token.

Well, the thing is, is now you've got so much more stuff that's happened with the team. And I want to show you something that what I'm concerned with, because this is the all time chart, right? Let me show it to you. Hopefully there's not a glare, you know, 18 cents right here, three and a half billion dollar market cap.

Well, now you see this little blip right here. This is what people need to understand. This, the volume is a lot, a lot crazier.

And this right here is what I want to show people. That spot right there, that spot, all of my subscribers got in right down here. Sorry for the finger in your face.

Right down there at the bottom. And then what it did is it consolidated for a little bit of time and then it exploded higher. Well, now I'll pull it back a little bit.

You can see this is where we are now. Okay. I believe you're about to experience this little consolidation, but it's going to go to the upside because there's about to be a lot of information coming out.

Just the other day, I put out a post about the relationship with Stellar Lumens, XLM, Onyx coin, and Chain. And I said, the only question is, I was asking a fun question because everybody likes investing in these ISO 2022, you know, 222 coins. So the only question is, is XCN going to do it? And they, three hours later answered, yes, we are.

That is our goal. And then the next morning, Chain.com, massive blockchain infrastructure company. It's been around since I believe 2014.

They came out and said, we are going to work diligently alongside the Onyx team, Onyx coin team to ensure that they are ISO compliant. I don't think the crypto market is ready for what this XCN is. Everyone calls it a crap coin.

It's because most people call everything a crap coin when they know nothing about it. And it's okay because I like these times. This is how I was treated when I was investing in XRP.

I wasn't a social media personality back then, but I got mocked left and right by anybody that owned Ethereum or Bitcoin. I was mocked for owning XRP and my investments have done very, very well. And I believe personally, as of right now, with the information I have in front of me that in 2025, XCN is going to be a lot higher in price than it is today.

So I'm excited. I've built up a position like I did with XRP and I'm excited. I'm very excited.

And so to all the people that are hating, it's just in the comment section, it doesn't bug me. All I care about is if my bank account grows. I mean, that's honestly, that's your report card if you're a good investor.

And so I took that risk transferring half my XRP index in. And I think in a year, it's going to be a different narrative. And very few people in this world can see things ahead of time, put the puzzle pieces together and figure out what's going on.

So I'm excited. If you guys want the DeFi course before we come out with our next pick and our next monthly call, it includes monthly coaching calls until January. The link's down below, the whole package and the DeFi Pro course, because a lot of people don't understand how to safely invest in decentralised DeFi products, projects before they go to big exchanges like finance, Coinbase.

Oh, yeah. Yesterday, finance listed futures for XCN. So they're growing and I'm excited about it.

I've got some more information coming out about XCN that nobody knows and is talking about, but it's going to take me a little bit of time to put together for you guys. All right. With that being said, thank you so much for watching.

The Economic Ninja is out.
